Regions and Spurs.....	10
NEC 4 NS Southbound Template .....	14
Path Notes .....	14
Regions and Spurs.....	15
Rolling Stock List .....	18

## ***General Notes***

There are four templates included with this distribution:

- NEC\_CSXNB           CSX Northbound activities
- NEC\_CSXSB           CSX Southbound activities
- NECTP\_NSNB       Norfolk Southern Northbound activities
- NECTP\_NSSB       Norfolk Southern Southbound activities

***Important note:*** Many of the switches in this route that are needed to access spurs for switching CANNOT be operated manually. To complete activities you generate using this template, **you should use SwitchList Generator’s “Convert All Switches to Manual” feature.**

In some cases you may need to convert the signals to permissive. This shouldn’t generally be necessary though and if you do it you should change them back as soon as you can, if the activity you generate has any AI traffic.

## NEC 4 CSX Northbound Template

### *Region Order*

#### **Order of regions going North**

- 1 Anacostia
- 2 Benning
- 3 Ivy City
- 4 Alexandria Junction
- 5 CSX South
- 6 Savage
- 7 Baltimore Steel
- 8 Bayview
- 9 Step
- 10 Winans
- 11 Wilsmere
- 12 Penrose

### *Path Notes*

Here below are some notes on some of the paths in this template.

#### **Benning-Ivy Yard**

This is a transfer job from the Benning Road Yard, round the “loop” (past Philpot Precision Casting) and back West into Ivy Yard.

***Important “pilot” note:*** At the beginning the AI Dispatcher will have you routed correctly out of Benning Road Yard, taking the right-hand switch to cross over to the right main, then cross over again to the three tracks on the far right. However while switching, if you back over the diverging switches the AI dispatcher may throw the junction switch out of the yard to the “normal” position (straight ahead rather than diverging to the right), and this will route you in the INCORRECT DIRECTION towards Chesapeake Junction on the Amtrak main. So, the first time this happens, since you converted all the switches to manual, throw the first two switches east of Benning Road Yard to the diverging (right-hand) routes. Or do that when you’re finished switching and ready to depart. See the CSX map, page 1. You want to run on the to main of the three tracks labeled with the letter “B” on that page.

## Benning – Navy Yard

In this CSX Northbound Template, the term “Navy Yard” refers to the East Philadelphia Industrial Area on the CSX shown in the overview map. There you’ll find the US Naval Shipyard, Girard Point Yard, and Snyder Avenue Yard. It is basically the northmost end of the CSX line in this route.

This path will enable you to work the full length of the CSX NEC 4.0 route, from Benning Road Yard near the far south/west, to the end of the line to the far north/east.

**Important “pilot” note:** At the beginning the AI Dispatcher will have you routed correctly out of Benning Road Yard, taking the right-hand switch to cross over to the right main, then cross over again to the three tracks on the far right. However while switching, if you back over the diverging switches the AI dispatcher may throw the junction switch out of the yard to the “normal” position (straight ahead rather than diverging to the right), and this will route you in the INCORRECT DIRECTION towards Chesapeake Junction on the Amtrak main. So, the first time this happens, since you converted all the switches to manual, throw the first two switches east of Benning Road Yard to the diverging (right-hand) routes. Or do that when you’re finished switching and ready to depart. See the CSX map, page 1. You want to run on the to main of the three tracks labeled with the letter “B” on that page.

## NEC 4 NS Southbound Template

### *Path Notes*

For activities heading southbound out of Penrose Yard. If you have switching in Penrose to make up your train (you probably will), you can get dispatcher permission to pass the signals. Initially the path is set to take you out the right hand main, then on the farthest east (right) track out of CP Penrose. The switches will be aligned automatically to take you that way, but if you pass that point and reverse, the switch will reset to the “normal” (straight ahead, not diverging) path. Also if you switch the left (west) side of the yard you might be tempted to depart on the left main. Don’t – you’ll be heading onto the CSX tracks. Instead, always depart out the right most main when leaving Penrose, and take the diverging path, even if you have to throw the switch manually, at CP Penrose, so as to leave on the farthest right/east track.

## Rolling Stock List

Here is a list of all .eng and .wag files included in the rolling stock pack, as well as the folders they will be installed into. We recommend using this rolling stock pack – certain fixes have been made to these including physics, coupler strength and bounding box correction, and they have been tested to perform well with this template set.
